

Professional Summary

Senior Software Engineer with 6+ years of experience designing and operating distributed, event-driven systems in AWS. Proven track record of building high-volume microservices, leading critical production systems, and driving large-scale platform and regulatory migrations. Strong background in cloud infrastructure, backend development, and reliability engineering within global trade and customs domains.

Core Competencies

- **Distributed Systems:** Event-driven microservices, asynchronous workflows, fault-tolerant system design
- **AWS Cloud:** Serverless and container-based architecture (Lambda, API Gateway, DynamoDB, S3, EC2, EKS)
- **Backend Development:** Python, REST APIs, asynchronous processing, workflow orchestration (Step Functions)
- **Infrastructure & DevOps:** Terraform, CI/CD pipelines, Docker, Kubernetes (EKS, AKS), infrastructure-as-code
- **Observability & Reliability:** CloudWatch, Splunk, OpenTelemetry, distributed tracing, production incident response
- **Data & Integrations:** Event streaming, SQS/SNS, Kafka, external API integrations (E2Open, IBM, Box)
- **Systems & Networking:** Linux (Ubuntu), Windows Server, networking fundamentals, Cisco routing/switching
- **Security:** Detection engineering, credential rotation, access control, Kerberos analysis

Work Experience

Senior Software Engineer | Nike Inc. | Global Trade and Customs

03/2021 – 04/2026

- Owned design and operation of distributed, event-driven microservices in AWS supporting global trade, customs, and tariff processing systems
- Led development of high-volume serverless workflows (Lambda, Step Functions) for purchase order and customs event processing, improving reliability and throughput
- Delivered end-to-end trade content and estimated duty systems enabling multi-country tariff calculations and regulatory compliance
- Implemented major regulatory changes (for example reciprocal tariffs and HTS updates) under tight timelines
- Drove production reliability by diagnosing and resolving high-severity incidents, including classification outages, API failures, and vendor integration issues
- Built observability with Splunk, CloudWatch, and OpenTelemetry to improve monitoring and debugging
- Designed integrations with external vendors (E2Open, IBM, Box), including large-file processing and asynchronous pipelines
- Contributed to platform migrations (SEC/S4HANA, NTN/NTS modernization) supporting global trade infrastructure evolution
- Standardized infrastructure patterns using Terraform, EKS, and CI/CD pipelines to improve deployment consistency and engineering velocity
- Served as interim Tech Lead, leading engineers and coordinating delivery during leadership transition

Cloud Engineer | Nike Inc. | Azure Engineering

09/2020 – 03/2021

- Queried Azure infrastructure with PowerShell
- Built PowerShell runbooks to automate Azure resource deployment

- Wrote PowerShell scripts to audit permissions across Azure resources

Cyber Security Analyst | Nike Inc. | Nike Cyber Defense Center

03/2020 – 09/2020

- Architected and built a serverless AWS solution to automate incident-ticket auditing
- Built dashboards for security operations metrics and reporting
- Led development of detections for Kerberos abuse and tuned dashboards to track malicious activity
- Participated in Purple Team exercises to validate detection effectiveness

Software Engineer | Nike Inc. | Trade Team

09/2019 – 03/2020

- Built and managed AWS infrastructure with Terraform and developed Python REST APIs with Okta SSO
- Helped design microservice architecture and implemented CI/CD practices with Jenkins
- Delivered a one-stop endpoint for brokers to retrieve customs data and product details for filings

IT Infrastructure Intern | George Fox University |

2017 – 2019

- Supported IT infrastructure operations including configuration changes, installations, cabling, Wi-Fi testing, server-room upkeep, and troubleshooting

Heavy Haul Truck Driver | Riverbrook Trucking |

2012 – 2019

- Operated heavy transport under strict safety and regulatory constraints
- Planned and executed legal transport of loads up to 16 ft wide, 16 ft high, and 250,000 lbs GVW across the Pacific Northwest

Activities / Certifications

Pacific Region Collegiate Cyber Defense Competition | Team Captain |

2018 – 2019

- Served as Team Captain on George Fox's first Collegiate Cyber Defense Competition team and qualified for Regionals
- Managed a team of 8 cybersecurity majors operating and hardening a corporate network under active attack simulations

Commercial Driver's License (Class A) | Salem, OR |

2016 – Present

Education

George Fox University | Newberg, OR | Bachelor of Science, Computer Science (Cybersecurity Emphasis)

2015 – 2019

Relevant Projects

Computer Vision for Agricultural Automation | |

2018 – 2019

- Developed a crop-identification system using computer vision in an interdisciplinary engineering project
