## Professional Summary

Senior Software Engineer with 6+ years of experience designing, building, and operating distributed AWS systems in compliance-heavy global trade and customs domains. I do my best work when systems are complex, timelines are tight, and precision matters: turning regulatory change, vendor systems, and high-volume event flows into production systems that teams can understand and trust. Strong background in backend engineering, cloud infrastructure, reliability, and technical leadership, with a bias toward precise fixes that solve the core issue and reduce operational disruption.

## Core Competencies

- **DISTRIBUTED SYSTEMS** → Event-driven services, asynchronous workflows, failure-mode design
- **AWS CLOUD** → Lambda, Step Functions, API Gateway, DynamoDB, S3, EC2, ECS
- **BACKEND ENGINEERING** → Python, REST APIs, service design, workflow orchestration
- **INFRASTRUCTURE & DEVOPS** → Terraform, CI/CD, Docker, ECS, repeatable deployment patterns
- **OBSERVABILITY & RELIABILITY** → CloudWatch, Splunk, OpenTelemetry, tracing, incident response
- **DATA & INTEGRATIONS** → SQS/SNS, Kafka, large-file pipelines, tariff and customs data providers, IBM, Box
- **TECHNICAL LEADERSHIP** → Architecture direction, code review, mentoring, delivery through ambiguity
- **SECURITY FOUNDATIONS** → Detection engineering, access control, credential rotation, Kerberos analysis

## Work Experience

### SENIOR SOFTWARE ENGINEER | NIKE INC. | GLOBAL TRADE AND CUSTOMS 03/2021 – 04/2026

- Led design of event-driven serverless workflows with Lambda, Step Functions, SQS/SNS, and DynamoDB, processing millions of purchase orders and thousands of customs events per hour at peak
- Turned urgent regulatory changes, including reciprocal tariffs and HTS updates, into production-ready workflows and operational playbooks under tight timelines
- Delivered customs classification and estimated duty systems that supported multi-country tariff logic, compliance reviews, and downstream broker filing workflows
- Drove incident response for classification outages, API failures, vendor integration issues, and data-quality problems, staying with problems through root cause and durable fixes
- Raised observability standards with Splunk, CloudWatch, OpenTelemetry, and runbooks so engineers could debug and own systems in production
- Designed vendor integrations and data feeds across tariff/customs providers, document platforms, and downstream ERP systems, with large-file processing, asynchronous pipelines, and clear failure handling
- Contributed heavily to internal platform modernization, using Terraform, ECS, and CI/CD patterns to make service deployments more repeatable
- Served as interim Tech Lead by setting delivery direction, reviewing designs and code, mentoring engineers, and keeping the team moving through a leadership transition

### CLOUD ENGINEER | NIKE INC. | AZURE ENGINEERING 09/2020 – 03/2021

- Built PowerShell runbooks to automate Azure deployments, inventory, and permission audits
- Queried deployed Azure infrastructure to give engineering teams a clearer view of ownership, access, and operational state
- Helped standardize repeatable cloud operations during Nike's broader cloud engineering transition

### CYBER SECURITY ANALYST | NIKE INC. | NIKE CYBER DEFENSE CENTER 03/2020 – 09/2020

- Designed and built a serverless AWS solution to automate incident-ticket auditing and reduce manual security operations review
- Built dashboards for security operations metrics, detection coverage, and analyst reporting
- Led detection work for Kerberos abuse and tuned dashboards to surface suspicious authentication behavior
- Participated in Purple Team exercises to validate detections against realistic attacker behavior

### SOFTWARE ENGINEER | NIKE INC. | TRADE TEAM 09/2019 – 03/2020

- Built Terraform-managed AWS infrastructure and Python REST APIs with Okta SSO for trade and customs workflows
- Helped establish microservice and CI/CD patterns with Jenkins for a team moving from manual delivery toward repeatable releases
- Delivered a broker-facing endpoint that consolidated customs data and product details needed for filings

**IT INFRASTRUCTURE INTERN | GEORGE FOX UNIVERSITY****2017 – 2019**

- Supported campus infrastructure operations across network, server-room, installation, and troubleshooting work

**HEAVY HAUL TRUCK DRIVER | RIVERBROOK TRUCKING****2012 – 2019**

- Operated heavy transport under strict safety, permitting, routing, and regulatory constraints
- Planned and executed legal movement of loads up to 16 ft wide, 16 ft high, and 250,000 lbs GVW across the Pacific Northwest

## Additional Experience

**PACIFIC REGION COLLEGIATE CYBER DEFENSE COMPETITION | TEAM CAPTAIN****2018 – 2019**

- Served as Team Captain for George Fox's first Collegiate Cyber Defense Competition team and qualified for Regionals
- Led 8 cybersecurity majors operating, defending, and hardening a corporate network under active attack simulations

**COMMERCIAL DRIVER'S LICENSE (CLASS A) | SALEM, OR****2016 – Present**

## Education

**GEORGE FOX UNIVERSITY | NEWBERG OR****2015 – 2019**

- Bachelor of Science, Computer Science (emphasis in Cybersecurity)

## Relevant Projects

**COMPUTER VISION FOR AGRICULTURAL AUTOMATION****2018 – 2019**

- Developed a crop-identification system using computer vision as part of an interdisciplinary agricultural automation project
